

GearWatch v1.1 Released

Equipment and fleet management system offers new features and enhancements

Denver, Colorado – October 1, 2008 – Profitool, a leading developer of construction management software, announced the release of GearWatch version 1.1, an equipment and fleet management system. The new GearWatch release is now available as of October 1, 2008.

“GearWatch offers an equipment fleet management system for unit maintenance tracking, costing, and income tracking to today’s sophisticated specialty contractors who want to manage and grow their businesses in a competitive marketplace,” said Keith Lightfield, Executive Vice President of Profitool. “GearWatch 1.1 improves the excellent tracking of equipment for maintenance, warranties, location, and availability status.”

GearWatch v1.1 offers the following new features and enhancements:

- Cost/Income Module
- Service Due enhancements
- User Dashboard to notify user of scheduled events
- Enhanced Unit Tracking
- Enhanced Work Order user interface
- Report Module
- Division Security
- General usability enhancements
- Enhanced User Documentation

Utilizing an intuitive Windows user interface, GearWatch runs on Microsoft’s SQL Server relational database. The system’s overall design centers on the needs of equipment maintenance shops. However, the need to integrate this software product with accounting/job costing software systems was not forgotten in the program design. Functionality is incorporated into the software that allows for the automated transfer of data between products like Profitool, Sage Timberline Office, and Sage MasterBuilder.

About Profitool

For more than 30 years, Profitool has provided specially designed software to the construction industry, allowing companies to better track their costs and manage projects. Today, the company designs, develops, implements, and supports software products that are geared for construction companies of all sizes. Profitool is not a commodity software vendor. Rather, the company focuses its attention on construction or construction-related companies that want to maximize their use of computer software technology through close interaction with Profitool.

Essentially, Profitool serves as an outside resource to customers' in-house IT staff to assist them with getting the most out of their investment in computer technologies.
