

## **GearWatch v2.01.01 Released**

### **Equipment and fleet management software offers new features and enhancements**

Denver, Colorado – October 1, 2009 – Profitool, a leading developer of construction management software, announced the release of GearWatch version 2.01.01 of its equipment and fleet management software. This new version of GearWatch is available immediately.

GearWatch v2.01.01 offers new features and product enhancements, including:

- Parts Inventory module
- Performance improvements and functional enhancements to the Work Order screen
- Startup maximized can now be customized
- Support for 64-bit systems for the GearWatch Web Service and client (in 32-bit compatibility mode)
- New reports for the Parts Inventory module

Utilizing an intuitive Windows user interface, GearWatch runs on Microsoft's SQL Server relational database. The system's overall design centers on the needs of the equipment manager and equipment maintenance shops. However, the need to integrate this software product with accounting/job costing software systems was not forgotten in the program design. Functionality is incorporated into the software that allows for the automated transfer of data from products like Profitool, Sage Timberline Office, and Sage MasterBuilder.

### **About Profitool**

For more than 30 years, Profitool has provided specially designed software to the construction industry, allowing companies to better track their costs and manage projects. Today, the company designs, develops, implements, and supports software products that are geared for construction companies of all sizes. Profitool is not a commodity software vendor. Rather, the company focuses its attention on construction or construction-related companies that want to maximize their use of computer software technology through close interaction with Profitool. Essentially, Profitool serves as an outside resource to customers' in-house IT staff to assist them with getting the most out of their investment in computer technologies.
